

Engineering Challenge

Make the biggest tower you can!

Our friend made his tower from cardboard boxes!

Tip 1: You can use anything to make your tower – Lego bricks, Jenga bricks, with plastic containers, books, pillows or in the garden with pots or maybe all the shoes in the house!

Tip 2: Once you build a tower, discuss what shape it is, or add different objects on top to see how stable your tower has been built.

Tip 3: Try making a tower which has windows or gaps which you can see through. Are these more or less stable than your first tower?

Tip 4: Can you build your tower upside down?

REMEMBER: The one who plays, tidies up after!
