HEIDELBERG - NOVEMBER SKY

ACTIVITY FOR CURIOUS LITTLE SPACE SCIENTISTS

It's St. Martin's Day soon and luckily we have some lovely clear nights ahead of us. Perfect for walking with your lanterns and some star-gazing! Discover the stars above us in Heidelberg on a nice November night! Find a spot with almost no street lights. Relax after a good walk with your lanterns and then look up at the skies!

Can you spot the Polar star (It's called Polaris)? Maybe the Big Bear (Ursa Major) and the Little Bear (Ursa minor) will help you! In winter it will be in the far North of the sky. Take a compass to spot the North!

Say goodbye to the swan (Cygnus) flying away for the winter and welcome Orion into our skies! Maybe you'll only be able to spot Orion's belt, but he is slowly coming into clear view and staying for the winter.

URSA MAJOR

POLAR STAR

URSA MINOR

CASSIOPEIA

CYGNUS

ORION

URSA MAJOR

- Alkaid
- Alkor
- Alioth
- Megrez
- Phekad
- Merak
- Dubhe

URSA MINOR

- Pherkad
- Kochab
